

LTE Wireless

Wireless LTE is an excellent choice for a cost effective failover solution. Avoid the high cost of downtime by automatically failing over to the cellular wireless network when your primary connection goes down. It is the ideal combination of cost and reliability for retail, restaurants, and small branch offices. With wireless, there is no reason for any business to go without a backup.

LTE FAILOVER

100% Uptime is what a business needs. However, often it feels like internet connections are letting us down when we need them the most. As businesses today rely so heavily on the internet for SaaS applications like Salesforce, Azure, Office 365, VoIP and more, Internet outages cost companies dearly in loss of productivity and create employee frustration.

The Comwave LTE solution, along with a managed primary internet connection, seamlessly and automatically redirects internet traffic in the event of a failure for 100% Uptime.

LTE PRIMARY

Some remote communities still don't have reliable broadband. Comwave Managed LTE connections are a perfect solution for speeds of up to 100mbps to either augment existing slower connections or to provide primary connections.

BENEFITS

- ✓ Setup shop anywhere with a wireless signal. A great choice for point-of-sale devices, digital signs, and kiosks.
- ✓ Seasonal use for stores that are not in operation year round.
- ✓ Protect your main network by putting 3rd party or IoT applications on a wireless connection.
- ✓ When wired connectivity options perform poorly or are not available, wireless can be often be used as an alternative, particularly if served by the fast LTE network.
