

MORE THAN JUST A FIREWALL ... IT'S UNIFIED THREAT MANAGEMENT

The Problem:

Network security breaches are common these days, with several happening around the world on a daily basis, and the number of cyberattacks is growing by the second. Some are considered minor, with limited loss of data or monetary resources, but many of them are considered major, or even catastrophic. Hackers and bad actors are continuously looking for new vulnerabilities to exploit. When networks are not secured, information about individuals, organizations, and even governments is at risk of being exposed and leveraged against us.

Being connected to the internet means that your business network will see significant amounts of traffic. While most of the internet traffic through your network is legitimate, a good portion of it may not be - enough to cause stability problems that can lead to vulnerabilities within your business.

Having your network hacked can put you out of business. Credit card theft, vandalism, ransomware and loss of intellectual property are all potential consequences of network hacking. Network hacks are often caused by the simplest of mistakes: clicking on a link in an unfamiliar email, visiting the wrong website, utilizing a misconfigured firewall or router, or simply using a computer or server with no antivirus protection. Hackers are constantly scanning networks looking for new vulnerabilities. As a consequence, your company can experience significant revenue loss as well. Many attacks launched on a network can lead to complete server or network failure. During the extended downtime, your company will likely be unable to make any transactions, leading to revenue loss. The longer your network stays down, the more revenue is lost, and the more likely it is that your company will begin to experience a loss of credibility.

We Run it...You Use it

Best in Class

Top Rated Security

Easy to Manage

The Solution:

Comwave Networks in partnership with Fortinet have developed an advanced solution to comprehensively protect your organization's networks. No organization is too small or too large to use Comwave Networks Security solution, and if you have an internet connection, you are eligible to use the solution. It's called Comwave Unified Threat Management, and in simple terms, it's "CLEAN INTERNET". This top-rated network security system helps reduce the risk of data loss, theft and sabotage. It is offered in either a simple, easy to use deployment model, or in a highly customized premium offering.

How It Works

Comwave Unified Threat Management (UTM) includes multiple security features combined into a single service. Using this service, network users are protected with several different features, including anti-virus and anti-spam protection, content filtering, email and web filtering, anti-malware and anti-ransomware protection and more. This enables you to consolidate network security services into one service from Comwave, simplifying the protection of the network. As a result, Comwave can monitor all threats and security-related activity through a comprehensive lens and send out weekly reports on the status of your network.

Comwave UTM comes in two packages: **Basic & Premium**.

The image displays two vertical cards comparing UTM packages. The left card is for 'UTM BASIC' and the right is for 'UTM PREMIUM'. Each card lists features with checkmarks and includes a price tag at the top.

Package	Price (AS LOW AS)	Features
UTM BASIC	\$25/month	<ul style="list-style-type: none">Continuous Network MonitoringMalware, Ransomware, and Virus ProtectionBlocks Malicious Website ActivityWeb Filtering from 3 Pre-Configured ProfilesWeekly Network Security Summary ReportsAutomatic Updates and Maintenance
UTM PREMIUM	\$85/month	<ul style="list-style-type: none">Continuous Network MonitoringMalware, Ransomware, and Virus ProtectionBlocks Malicious Website ActivityCustom Web Filtering for Restrictive AccessCustom Control of Third-Party ApplicationsCustom Weekly Network Security Summary ReportsSelf-Service Web Portal for Full Control of Network SecurityAutomatic Updates and Maintenance

Start protecting your business now before it's too late.
